## WORK EXPERIENCE

---

### Unite Us

*Data Scientist 2*

**Los Angeles, CA**

*April 2023 – Present*

- Architected and led the technical implementation an autonomous agentic workflow using LLMs and Retrieval-Augmented Generation to automate complex social care resource data ingestion, accelerating onboarding.
- Deployed autonomous agents to orchestrate social care referral workflows, reducing rejected referral volume by 4% and decreasing average referral time by 1.3 days while maintaining 98% grounded answer accuracy rate.
- Led the successful development and deployment of predictive models for the Unite Us Insights Growth platform, driving a 30% increase in targeted customer engagement and a 20% boost in campaign ROI.
- Established the engineering standards and CI/CD patterns for 50+ production-grade models, implementing automated testing and deployment pipelines that enforced production level rigor across the organization.

### Unite Us

*Data Scientist 1*

**New York, NY**

*May 2021 - April 2023*

- Received the 2022 Unite Us PROPS Award for developing a Dash application that modernized an outdated product, eliminating the need for daily manual reports and streamlining the customer request experience.
- Demonstrated the beneficial impact of the company platform to external stakeholders by highlighting how addressing Social Determinants of Health (SDOH) improves health outcomes, and reduces healthcare costs.
- Created machine learning models using electronic health record (EHR) data, integrating Social Determinants of Health variables to enable healthcare customers to implement preventative care strategies.

### Pollenate

*Founder*

**Los Angeles, CA**

*August 2023 - Present*

- Launched a commercial pollination marketplace, serving as the sole engineer and founder to build the end-to-end infrastructure which streamlined agricultural operations and negotiations for commercial beekeepers.
- Spearheaded the development of machine learning allocation agents that optimize beekeeper logistics, resulting in measurable reductions in operational overhead and maximized crop productivity for agricultural partners.
- Managed the full product roadmap and go-to-market technical strategy, personally overseeing the deployment of secure payment systems and formal contract automation to drive platform adoption and user trust.

## OPEN SOURCE CONTRIBUTIONS

---

### Augur

*Developer + Maintainer*

**Los Angeles, CA**

*May 2026 – Present*

- Designed and published Augur, an open-source TypeScript RAG SDK with per-query routing across vector, BM25, hybrid, and cross-encoder rerank including observability for engineers building retrieval applications.

### Anna's Archive

*Contributor*

**Los Angeles, CA**

*May 2025 – Present*

- Open source contributor to Anna's Archive, assisting with infrastructure, website, and data accessibility for the world's largest open-source shadow library enabling everyone free access to knowledge and entertainment.

## EDUCATION

---

### New York University, Tandon School of Engineering

*Bachelors of Science in Science & Technology Studies, Data Science*

**New York, NY**

- Organizations & Awards: Dean's List, Data Science Club, Alpha Epsilon Pi

## SKILLS & INTERESTS

---

**Skills:** Python | R | SQL | Java | Pytorch | Tensorflow | LangChain | Pydantic | AWS | GCP | Snowflake | FastAPI

**Interests:** Autonomous Vehicles, Soccer, Video Games, Hiking, Travel, Skiing, Gardening
